

1. Organisation Overview

Name of the Organisation

Ubuntu Tech Solutions

Background

Ubuntu Tech Solutions is a youth-led technology company founded by young Information Technology graduates. The organisation was created with the purpose of supporting small and medium-sized businesses by helping them adopt digital technologies.

The company began by assisting local community businesses with basic digital services such as website creation and social media setup. As demand increased, Ubuntu Tech Solutions expanded its services to include web development, digital marketing support, and IT consulting.

The core philosophy of the organisation is inspired by the concept of “Ubuntu”, meaning humanity and community. This reflects the company’s belief in growing together by empowering others through technology.

2. Problem Statement

Many small businesses face challenges in growing their customer base due to a lack of digital presence. In today’s economy, most customers search for products and services online before making decisions.

However, many small businesses still rely on traditional marketing methods such as word-of-mouth and physical advertising, which limits their visibility and competitiveness.

Ubuntu Tech Solutions addresses this gap by providing affordable, user-friendly, and professional web solutions that help businesses establish a strong online presence and reach a wider audience.

3. Project Aim

The aim of this project is to design and develop a modern, responsive, and user-friendly website for Ubuntu Tech Solutions that effectively communicates the company’s services, values, and contact information.

The website will serve as a digital platform that enhances the company’s visibility and professionalism while making it easier for potential clients to engage with its services.

4. Objectives

The main objectives of this project are:

- To design a clean, modern, and professional website layout
- To clearly present the company's services and value proposition
- To ensure the website is mobile-responsive and accessible across devices
- To improve user experience through simple navigation and structure
- To include a functional contact system for client enquiries

5. Target Audience

The website is designed for:

- Small business owners
- Start-up entrepreneurs
- Community-based organisations
- Individuals seeking affordable digital solutions

These groups typically require cost-effective and easy-to-understand technology services to support their business growth.

6. Website Features

The proposed website will include the following key features:

- Home page with a clear introduction and brand message
- About Us section describing the company's mission and background
- Services page outlining all digital solutions offered
- Portfolio section showcasing previous projects
- Contact page with a user-friendly enquiry form
- Responsive design compatible with mobile, tablet, and desktop devices
- Social media integration for improved engagement

7. Project Timeline

Phase	Task	Duration
Phase 1	Research and requirement gathering	1 week
Phase 2	Final review and submission	1 day

9. Conclusion

Ubuntu Tech Solutions demonstrates how technology can be used to empower small businesses and improve their access to digital markets. This website project is designed to strengthen the company's professional image, attract potential clients, and clearly communicate its services.

The final website will be structured, responsive, and user-friendly, ensuring accessibility for all users while maintaining a professional standard suitable for academic and real-world application.
